EXPERIENCE

Software Engineer · Altimate AI

Dec 2025 – Present

AI-powered cost optimization & observability platform for Snowflake and Databricks

- Built the Databricks cost-observability product end to end — jobs, clusters, SQL warehouses, queries, and AI/ML services — growing the platform from Snowflake-only into a multi-lakehouse product.
- Designed Auto-Tune, the flagship optimization engine that right-sizes customer compute and safely rolls back: a crash-safe apply/rollback state machine with durable audit events and preflight validation against live Databricks workspaces.
- Migrated 100+ hand-written metrics onto a governed dbt MetricFlow semantic layer backed by a compiled Rust engine, validating 100% data parity via A/B testing.
- Architected ELT pipelines on Apache Iceberg, dbt/Trino, and ClickHouse — multi-cloud billing ingestion across AWS, Azure, and GCP (FOCUS spec) and Spark event-log analysis down to individual query plans.
- Owned the cost-savings attribution engine: refactored it to be incremental and ClickHouse-backed, fixing correctness bugs so customer-facing savings numbers are trustworthy.
- Built internal AI engineering infrastructure — LLM agents, MCP servers, multi-model code review — and contributed to the open-source dbt Power User VS Code extension; shipped 500+ merged PRs across frontend, backend, and data pipelines.

Software Engineer · BawsHuman

Dec 2023 – Present

All-in-one fitness app for athletes — shipped to the App Store with 1,000+ beta signups

- Designed and built the product with React Native, Expo, and Django: workout tracking, Strava-style live route visualization, and Apple Watch sync via HealthKit.
- Built forum and real-time chat features with a Django REST API and TypeScript frontend, lifting user engagement 35%; onboarded 6 elite trainers.

Programming Instructor · Learn2Code — taught K-12 students JavaScript, Python, and Scratch. Dec 2023 – Jan 2024

PROJECTS

Smart Bell — IoT doorbell on Raspberry Pi with a Flutter app: presence detection, push notifications, live video streaming. 2023

Geometry Dash on FPGA — platform game in hardware on a BASYS3 board: state machines, sequential logic, VGA pipeline. 2023

SKILLS

Languages	Python, TypeScript, SQL, Rust, C/C++, Verilog
Data & Infra	Snowflake, Databricks, ClickHouse, dbt, Apache Iceberg, Trino, Airflow, Kubernetes, AWS, PostgreSQL
Product	React, Next.js, React Native, FastAPI, Django, Playwright
AI	LLM agents, MCP servers, agent harnesses, Claude API

EDUCATION

B.S. Computer Engineering · University of California, Santa Cruz

Sept 2019 – Dec 2023

Concentration in Systems Programming · Dean's Honors List
